AN ORDINANCE to amend the Municipal Code of Indianapolis, 1951, General Ordinance No. 140, 1951, as Amended, and more particularly Title 9, Chapter 5, Section 9-527 thereof, by the addition of sub-section 4 thereto, relating to cutting into street pavements to repair utilities and sewers, and fixing a time when the same shall take effect.

### BE IT ORDAINED BY THE COMMON COUNCIL OF THE CITY OF INDIANAPOLIS, INDIANA:

Section 1. That Title 9, Chapter 5, Section 9-527 of the Municipal Code of Indianapolis, 1951, General Ordinance No. 140, 1951, as Amended, be, and the same is, hereby amended by the addition of sub-section 4 thereto, to read as follows, to-wit:

(4) Unless an extreme emergency exists no pavements of the City Streets are to be opened for utility or sewer repairs on Friday or Saturday of any week. All pavement openings for both flexible (bituminous concrete) and rigid (cement concrete) types shall be sawed. All sawing shall be done in a workmanlike manner, having all lines both longitudinally and transversely straight and parallel with each other. In the case of flexible (bituminous concrete) pavements, it shall be sawed completely through the bituminous material to its base. If the base is cement concrete, it may be broken out with a pneumatic concrete breaker. In case of a rigid (cement concrete) pavement, it shall be sawed in a manner as set out above to a depth of at least two inches then broken out with a concrete breaker. When openings are to be made in "One-way," or "Arterial Streets," work shall be carried out in a diligent and expeditious manner, but no work shall be carried on between the hours of 6:00 o'clock A.M. and 9:00 o'clock A.M., and between the hours of 3:00 o'clock P.M. and 6:00 o'clock P.M. When work on the repair job ceases on account of the time set out, all excavated materials such as sub-soil and pavement fragments shall be hauled off the pavement. The opening in the street shall immediately be protected by placing sufficiently strong steel plates over the openings. The steel plates shall span the openings and extend beyond at least 12 inches in all directions. For safety the

plates shall be anchored to pavement to prevent any lateral movement. When repairs have been made and backfilling of opening is ready for placement, the material shall be carefully placed around pipes or conduits and well compacted if soil is used. Soil backfill shall be placed in approximately 4 inch courses and compacted thoroughly with a powered tamper or its equal. Where openings justify, a granular (course sand) backfill it shall be deposited and brought up to the elevation for the base, in case of a bituminous surface course, or to the proper elevation for a cement concrete course. Thickness of base and bituminous top course and cement concrete course shall be restored in their original thicknesses. Steel plates shall again be used for protection until the final repairs have been made and pavement is old enough to sustain traffic loads. Contractors and Utility Companies, performing work in "Arterial" or "One-way" Streets shall complete the entire project at their expense. All Contractors making openings in streets other than "Arterial" or "One-way" Streets shall conform substantially with methods as set out for "Arterial" or "One-way" Streets except that work may start and end at their discretion. In all streets where openings are to be made, the opening or openings shall be protected with suitable barricades and warning signs to prevent any potential traffic mishap while work is in progress. When backfill of the openings in streets other than "Arterial" or "One-way," has been satisfactorily completed, the Contractor shall notify the Street Repair Department of the Street Commissioner's Office immediately in order that speedy repairs can be made to the final base and surface courses by the Street Commissioner. In the case of repairs being made by the Street Commissioner's Office, the Contractor, making the opening shall be required to pay the usual fee on the basis of the square footage involved.
