Milton, Indiana 47357

**ABSTRACT:** Two hundred seventeen species of Collembola are reported from Indiana; forty species are reported for the first time. Original reference citations to first reports are provided as well as updated taxonomic citations. *Multivesicula harti* Rusek is newly combined in *Tullbergia* as *Tullbergia harti* (Rusek), **comb. nov.**

**KEYWORDS:** Checklist, Collembola, Indiana, *Multivesicula*, new combination, *Tullbergia*.

## INTRODUCTION

The first collembolan described from Indiana was *Sinella cavernarum* (Packard), which was discovered as part of a cave life study (Packard, 1888). Since that time, numerous species have been described from this State, largely through the collected efforts of Indiana workers such as R.F. Wilkey, L.P. Pedigo, J.W. Hart, and R.D. Waltz. Indiana may well be distinguished for having produced more Collembola workers than any other State.

This paper contains a checklist of the Indiana Collembola assembled through twenty-five years of research. Most of this work took place in east-central Indiana centered in and around Wayne County. However, collections from throughout the State have been studied and continue to form the basis for our mutual work. Much remains to be done.

Two hundred seventeen species are listed from Indiana; forty of the records are new. Several new species are awaiting description as of this writing, and as additional collections continue to be worked and studied, additional species will certainly be added to this checklist. Workers interested in collembolan biology should refer to the excellent works of Christiansen (1964), Maynard (1951), and Snider (1967). Papers have also been written on individual Indiana species (Fjellberg, 1987; Hart, 1979; Hart and Waltz, 1995; Pedigo, 1966, 1967, 1968, 1970a, 1970b; Waltz and Hart, 1987, 1995a, 1995c). Several other papers have been derived, at least in part, from the work in Indiana, including papers by Hart and Allamong (1979), Waltz (1997, in press), Waltz and Hart (1995b), and Waltz and McCafferty (1979).

Distributional county records are not provided in this report due to the authors' shared opinion that distributional records of Collembola, at this stage

of our knowledge, are artifacts of active collecting and have little biogeographic significance or other informational content. The taxonomy of many species is in flux, making comparisons of regional faunas based on earlier records of doubtful value. Furthermore, some species reported herein are not generally known from the Nearctic (e.g., *Stenacidia violacea* Reuter (in New York, Alberta, and Indiana) and *Hypogastrura palustris* Martynova (a Palearctic species)). Why these species should be reported from Indiana and not elsewhere in the Nearctic is not easily explained except as collecting artifacts. Christiansen (1990) and Christiansen and Bellinger (1980, 1981, 1992) provide the best treatment of species distributions in the Nearctic based on current taxonomic understandings.

Voucher specimens are deposited in either the Purdue Entomological Research Collection at Purdue University, West Lafayette, Indiana, or in the collection of R.D. Waltz, Indianapolis. Voucher specimens previously cited as being held at Earlham College in Richmond, Indiana, are now housed in the Purdue Entomological Research Collection.

#### CLASSIFICATION AND ANNOTATIONS

Some species, which appeared in the earlier literature, are not included in the current checklist (e.g., *Friesea pentacantha* Mills (Hart, 1971), *Isotomurus palustris* L. (Mills, 1934), *Hypogastrura armata* (Nicolet) (Wilkey, 1951), and many of the species listed by Arnett (1969)). These species either could not be verified due to a lack of voucher specimens, were misidentified, or have been the subjects of significant taxonomic revisions, placing the unvouchered original report in doubt because the specimen might represent any one of several newly recognized species.

The taxonomy of the Tullberginae is especially volatile, with many new genera being described from all parts of the world. The authors chose to use a conservative nomenclature for Nearctic *Tullbergia* Lubbock until a more synchronous and phylogenetically justified nomenclature becomes available. Therefore, *Multivesicula harti* Rusek has been placed in the genus *Tullbergia*, resulting in the new combination, *Tullbergia harti* (Rusek), **comb. nov.**.

The checklist of Indiana Collembola follows closely the higher classification adopted by Christiansen and Bellinger (1980, 1981, 1992). Changes in nomenclature and new species described since Christiansen and Bellinger (1980, 1981, 1992) are reported. Junior subjective synonyms previously used for the Indiana species are cited beneath their current, nomenclaturally accepted senior synonym and form. Subgenera are indicated only when these genera are other than the most strict application of the genus (i.e., *sensu stricto*).

Several of the species identified are in doubt either because not enough material was available to reconcile the morphological differences discovered, or because the species are based on older records of ubiquitous species that are possibly inclusive of additional and more recently recognized taxa.

## CHECKLIST OF INDIANA COLLEMBOLA (HEXAPODA)

## Suborder Arthropleona

## Superfamily Hypogastruroidea

## Family Onychiuridae

## Subfamily Tullbergiinae

<i>Tullbergia ampla</i> Christiansen and Bellinger, 1980	Christiansen and Bellinger, 1980
<i>Tullbergia clavata</i> Mills, 1934	Hart, 1970
<i>Tullbergia granulata</i> Mills, 1934	Hart, 1970
<i>Tullbergia harti</i> (Rusek), 1991, comb. nov.	Rusek, 1991
<i>Tullbergia macrochaeta</i> (Rusek), 1976	Christiansen and Bellinger, 1980
<i>Tullbergia mala</i> Christiansen and Bellinger, 1980	Herein
<i>Tullbergia nulla</i> Christiansen and Bellinger, 1980	Christiansen and Bellinger, 1980

<i>Sminthurus banksi</i> Christiansen and Bellinger, 1981 [as <i>S. dorsalis</i> Banks, 1899 nec Fitch, 1863]	Hart, 1974
<i>Sminthurus fitchi</i> Folsom, 1896 [as <i>S. trilineatus</i> Banks, 1903]	Pedigo, 1966
<i>Sminthurus medialis</i> Mills, 1934	Pedigo, 1970a

*Sminthurus sylvestris* Banks, 1899

[as *S. fascialis* Banks, 1903]

Hart, 1973

*Sphyrotheca minnesotensis* (Guthrie), 1903

Pedigo, 1970a

#### Subfamily Dicyrtominae

*Dicyrtoma (Ptenothrix) atra* (Linne), 1758

[as *P. unicolor* (Harvey), 1893]

Wilkey, 1950

*Dicyrtoma flammea* Maynard, 1951

Hart, 1973

*Dicyrtoma hageni* (Folsom), 1896

Christiansen and Bellinger, 1981

*Dicyrtoma (Ptenothrix) marmorata* (Packard), 1873

[as *P. oswegatchiensis* Maynard, 1951]

Pedigo, 1970a

Hart, 1973

#### ACKNOWLEDGMENTS

The authors thank the following with a special sense of indebtedness and gratitude for providing critical assistance in verifying our determinations and providing much informative and pleasurable dialogue over the past twenty-five years: Peter F. Bellinger, J.-M. Betsch, Ken Christiansen, Arne Fjellberg, P.N. Lawrence, J. Najt, R.J. Snider, and D.L. Wray.
